

## EFM made simple with QuickSense

A **complete** EFM solution for gas flow measurement in a **compact** package.

The QuickSense EFM is a CID1 solution that is more cost-effective than traditional SCADA EFM solutions while still allowing you to use your preferred SCADA software.

### Ingenious design, great benefits

- Quick installation
- Plug and play maintenance
- LTE communication
- Mobile app for viewing device data in the field

# Options & Benefits

**Standard Direct Mount**

**External Solar Panel and Antenna**

**Remote Mount**

## Your choice of SCADA software

A secure digital interface (API) that uses Sparkplug B to communicate with your company's preferred SCADA software, so you can view trends and reports and manage alarming in the same way.

## Regulatory compliance

Directive 017 compliance for flow measurement. CSA approved for operation in CID1 hazardous zones.

## Easy replacement and maintenance

Simple to replace your existing systems that need an upgrade. Maintenance is plug and play with TOKU quick connect design.

## Bluetooth to your phone

Configure settings and view current readings via Bluetooth to a mobile app (iOS or Android) in the field. Manage flow parameters remotely with web app.

## Cost-effective

More cost-effective than traditional SCADA EFM systems, especially for older wells with lower production rates.

## Ongoing high-value service

Ongoing remote software updates and telecom management. Device health and performance monitoring with notification for issues. Protecting data through redundancy and keeping cybersecurity up to date.
